Office 365 Security Tune-Up

Maximize the security capability of your current Office 365 tenant

Unsecured company data can cost millions in lost research, regulatory fines, or litigation settlements, but protecting your information shouldn't make it harder for workers to get their jobs done. Analyzing your current Office 365 Secure Score and configuring all the security controls available in your Office 365 tenant will give you an extra layer of security.

Scope of engagement...

This engagement will take about a month and deliver the following benefits:

- An assessment of your company's risk profile and security priorities
- A report identifying the possibilities for enhanced security by enabling the security features available in your Office 365 tenant
- Implementation and role out of security controls in your Office 365 tenant
- Webinar with overview of cybersecurity best practice for all users to show the new security capabilities they can take advantage of in your tenant

Step 1 Kick Off Risk Profile	Step 2 Reports Settings	Step 3 Review Roadmap	Step 4 Enable Controls	Step 5 User Education	Step 6 Enable Controls
• Project scope • Customer Risk Profile • Security Requirements • Stakeholders	• Secure Score • Review Settings • Identify gaps • Recommended actions • Roadmap	• Report and Roadmap • Implementation Plan • Agree on Milestones	• Enable controls • Configure Settings • No End User impact	• End user Training • Cybersecurity best practice • Controls that impact end users	• Enable Controls • Configure Settings • End User impact
